

Our reusable Mircera packaging is a sustainable solution to reducing waste.

Mircera is an agent used to treat anemia associated with chronic kidney disease and is important to the dialysis process

Protecting the Environment

We always strive to reduce the waste associated with product packaging. One way we've done this is by replacing the containers that were previously used to transport Mircera with reusable packaging.

Continually Improving

The new reusable packaging is emptied, returned, cleaned, and put back into circulation.

Not only does this create a sustainable cycle, it also creates less work for our employees and reduces the cost of Mircera packaging.

Impact

Through this process, we keep packaging out of landfill.

The Mircera Life Cycle
